IPFS

IPFS

- Unlike HTTP which loads files from one server at a time, content addressing decouples data from its location.
- IPFS retrieves files from multiple sources at once in a peer-to-peer fashion.
- Fingerprint your data
 - ❑ Content identifiers (CIDs) give every piece of content, data, or file a permanent hash address that you can [“pin”](#) to keep.
- Store & distribute content freely
 - ❑ Our peer-to-peer network joins thousands of nodes so you can find all nodes with the content you want and help others discover the content you have.
- Optimize content delivery
 - ❑ IPFS caches and stores data on local servers, saving bandwidth via more efficient distribution and delivery.
